

## Expedition Log of the S/V *Carlyn*

Date: October 15<sup>th</sup>, 2011

Trip Day: 2

Location: East side of Blake Island

Name(s): Jesse Valenzuela and Rose Stough

School/Grade: Technology Access Foundation Academy,  
10<sup>th</sup>-12<sup>th</sup> grades

### Afternoon Report From *Carlyn* to the Web

#### Interesting stories:

Alaina shared her previous experience on the east side of Blake Island, which influenced the choice of other students onboard of where they chose to go.

Putting up the main sail was an interesting experience as well.

#### Favorite wildlife sightings, quotes, and games:

The peanut butter and jelly game was an interesting game in which a third of the students attempted to communicate a task that had to be accomplished to another group, who told the last third, who had their eyes closed, what to do in order to accomplish that task.

Several people said that they enjoyed seeing deer, jellyfish, sea-lions, and the different types of plankton.

#### Describe the anchorage or moorage where *Carlyn* is right now:

The *Carlyn* is currently moored at a dock on the east side of Blake Island.

#### Today's weather:

The weather today was overcast and there were fairly large waves which made the boat sway a lot for the first half of the day, and the second half of the day had blue skies and was warmer due to the sun.

#### Describe highlights from today's science and sailing watches:

For two people, the highlight was losing an important paper and a funnel in the ocean for the science watch.

Completing the experiment was another highlight, along with steering the boat to where we needed to dock.

#### Questions, concerns, or expectations for tomorrow:

People wish to get lost while enjoying the sun, but some choose to wish for a safe arrival to Seattle.
